In re Application of :
John C. Harvey, et al :
Serial No. 08/056,501 : DECISION UNDER 37 CFR
Filed: May 3, 1993 : 1.28(c)(2)
Patent No. 5,335,277 :
Issued: August 2, 1994 :
Attorney Docket No. 56347 :

This is in response to the paper filed January 10, 1995, under 37 CFR 1.28(c)(2), comprising a payment of a fee deficiency and a verified statement of facts from patent counsel.

Attention is directed to the Notice, Patent and Trademark Office Implementation of 37 CFR 1.28(d) and 1.56(c), (f) and (g), published at 1098 OG 502 on January 3, 1989. A copy of that Notice is attached. The payment of the fee deficiency under 37 CFR 1.28 has been received pursuant to that Notice and small entity status will no longer apply.

The payment received totals \$585 and relates to the issue fee.

However, fee deficiencies are to be paid at current fee levels at the time of the deficiency payment, rather than a simple doubling of the fee paid in error as was currently done. An outstanding deficiency of \$40 existed as of January 10, 1995 (as authorization was not provided in the January 10, 1995 paper to charge a deposit account for additional fees). The actual amount may vary depending on when the outstanding deficiency is submitted.

The application will be retained by this Office for TWO MONTHS from the mail date of this letter to await any further correspondence. Further correspondence with respect to this matter should be addressed as follows:

By mail: Commissioner of Patents and Trademarks

REMARKS ON APPLICATIONS FOR PATENT

Patent No. 2,681,561. The invention relates to a method of determining the relative humidity of a gas mixture. The method consists in measuring the dew point of the gas mixture and the temperature of the gas mixture. The relative humidity is then determined by comparing the measured dew point with the saturation vapor pressure of the gas mixture at the measured temperature. The method is simple and accurate and can be used for a wide range of gas mixtures.

Patent No. 2,681,562. The invention relates to a method of determining the relative humidity of a gas mixture. The method consists in measuring the dew point of the gas mixture and the temperature of the gas mixture. The relative humidity is then determined by comparing the measured dew point with the saturation vapor pressure of the gas mixture at the measured temperature. The method is simple and accurate and can be used for a wide range of gas mixtures.

Patent No. 2,681,563. The invention relates to a method of determining the relative humidity of a gas mixture. The method consists in measuring the dew point of the gas mixture and the temperature of the gas mixture. The relative humidity is then determined by comparing the measured dew point with the saturation vapor pressure of the gas mixture at the measured temperature. The method is simple and accurate and can be used for a wide range of gas mixtures.

REMARKS ON APPLICATIONS FOR PATENT

Patent No. 2,681,564. The invention relates to a method of determining the relative humidity of a gas mixture. The method consists in measuring the dew point of the gas mixture and the temperature of the gas mixture. The relative humidity is then determined by comparing the measured dew point with the saturation vapor pressure of the gas mixture at the measured temperature. The method is simple and accurate and can be used for a wide range of gas mixtures.

Patent No. 2,681,565. The invention relates to a method of determining the relative humidity of a gas mixture. The method consists in measuring the dew point of the gas mixture and the temperature of the gas mixture. The relative humidity is then determined by comparing the measured dew point with the saturation vapor pressure of the gas mixture at the measured temperature. The method is simple and accurate and can be used for a wide range of gas mixtures.

Patent No. 2,681,566. The invention relates to a method of determining the relative humidity of a gas mixture. The method consists in measuring the dew point of the gas mixture and the temperature of the gas mixture. The relative humidity is then determined by comparing the measured dew point with the saturation vapor pressure of the gas mixture at the measured temperature. The method is simple and accurate and can be used for a wide range of gas mixtures.

Patent No. 2,681,567. The invention relates to a method of determining the relative humidity of a gas mixture. The method consists in measuring the dew point of the gas mixture and the temperature of the gas mixture. The relative humidity is then determined by comparing the measured dew point with the saturation vapor pressure of the gas mixture at the measured temperature. The method is simple and accurate and can be used for a wide range of gas mixtures.

Patent No. 2,681,568. The invention relates to a method of determining the relative humidity of a gas mixture. The method consists in measuring the dew point of the gas mixture and the temperature of the gas mixture. The relative humidity is then determined by comparing the measured dew point with the saturation vapor pressure of the gas mixture at the measured temperature. The method is simple and accurate and can be used for a wide range of gas mixtures.

Patent No. 2,681,569. The invention relates to a method of determining the relative humidity of a gas mixture. The method consists in measuring the dew point of the gas mixture and the temperature of the gas mixture. The relative humidity is then determined by comparing the measured dew point with the saturation vapor pressure of the gas mixture at the measured temperature. The method is simple and accurate and can be used for a wide range of gas mixtures.
